

IN THE CLAIMS:

The following listing of claims replaces all previous listings and versions:

1. (Currently Amended) An Internet boutique system for selling commodities in total coordination, the system comprising:

a user image database;

user image managing means for acquiring an image of a user of the Internet boutique system from outside thereof while adjusting the size of the image such that the face portion thereof just fits in an indicated frame, and recording and managing the image of the user after its size has been adjusted in said user image database;

coordinating means for displaying the image of a commodity selected by the user from the images of commodities for sale in the Internet boutique system, in combination with said image of the user;

purchase processing means for performing a process of purchasing a commodity confirmed by said coordinating means and determined to be purchased by said user;

a purchased commodity database; and

purchased commodity managing means for recording and managing data of the commodity determined to be purchased by said user, in said purchased commodity database.

2. (Currently Amended) An Internet boutique system according to claim 1, further comprising:

commodity registering means for allowing a seller to register the ~~image~~ images of a ~~commodity~~ commodities for sale in the Internet boutique system;

a commodity image database; and

commodity image managing means for classifying the images of commodities for sale which are registered by said commodity registering means according to at least type, design, and color, adjusting sizes of said images of commodities to be registered to a frame for each commodity type, and recording and managing the ~~classified~~ images of commodities in said commodity image database.

3. (Original) An Internet boutique system according to claim 1, wherein said coordinating means comprises means for simultaneously displaying a first view of a plurality of images of commodities for sale in the Internet boutique system, and a second view of a combination of the image of the selected commodity and the image of the user, separately from each other.

4. (Original) An Internet boutique system according to claim 3, wherein said second view includes a portion at a given ratio of horizontal and vertical dimensions, and said first view is disposed in an area other than said second view.

5. (Original) An Internet boutique system according to claim 4, wherein said first view includes a pair of portions displayed on opposite sides of said second view, and said coordinating means comprises means for displaying a plurality of images of commodities of different types respectively in said portions of the first view.

6. (Original) An Internet boutique system according to claim 4, wherein said given ratio of horizontal and vertical dimensions is substantially equal to a ratio horizontal and vertical dimensions of a human body.

7. (Original) An Internet boutique system according to claim 1, wherein said user image managing means comprises means for extracting an image in a prespecified range from the acquired image of the user, and recording and managing the extracted image in said user image database.

8. (Currently amended) A server comprising:

user image managing means for acquiring an image of a user of an Internet boutique system from outside thereof while adjusting the size of the image such that the face portion thereof just fits in an indicated frame, and recording and managing the image of a user after its size has been adjusted;

a communicating means for transmitting and receiving the image of a commodity for sale in ~~the~~an Internet boutique system and data of ~~the~~a user, via the Internet to and from a user terminal connected to the Internet;

a purchased commodity database; and

purchased commodity managing means for recording and managing data, which is included in the data received by said communicating means, of a commodity determined to be purchased by a user of the Internet boutique system, in said purchased commodity database.

9. (Original) A server according to claim 8, further comprising:

commodity registering means for allowing a seller to register the image of a commodity for sale in the Internet boutique system;

a commodity image database; and

commodity image managing means for classifying the images of commodities for sale which are registered by said commodity registering means according to at least type, design, and color, and recording and managing the classified images of commodities in said commodity image database.

10. (Original) A server according to claim 8, further comprising:

program managing means for transmitting, from said communicating means, a coordination program for combining the image of the commodity for sale in the Internet boutique system with an image of the user to confirm how the combined images are coordinated with each other.

11. (Original) A server according to claim 8, further comprising:

a user image database; and

user image managing means for acquiring an image of the user from outside of the Internet boutique system, and recording and managing the image of the user in said user image database.

12. (Original) A server according to claim 11, wherein said user image managing means comprises means for extracting an image in a prespecified range from the

acquired image of the user, and recording and managing the extracted image in said user image database.

13. (Original) A server according to claim 11, further comprising:

authenticating means for authenticating the user when the user uses said user image database via said user image managing means from outside of said server.

14. (Currently amended) A user terminal comprising:

a user image database;

user image managing means for acquiring an image of a user of an Internet boutique system from outside thereof while adjusting the size of the image such that the face portion thereof just fits in an indicated frame, and recording and managing the image of the user in said user image database;

coordinating means for displaying the image of a commodity selected by the user from the images of commodities for sale in the Internet boutique system, in combination with said image of the user;

purchase processing means for performing a process of purchasing a commodity confirmed by said coordinating means and determined to be purchased by said user; and

communicating means for transmitting and receiving the images of commodities for use in the Internet boutique system, information of the user, and information of the commodity determined to be purchased, via the Internet to and from a server.

15. (Original) A user terminal according to claim 14, wherein said user image managing means comprises means for extracting an image in a prespecified range from the acquired image of the user, and recording and managing the extracted image in said user image database.

16. (Original) A user terminal according to claim 14, further comprising:
authenticating means for authenticating the user when the user uses said user image database via said user image managing means from outside of said server.

17. (Original) A user terminal according to claim 14, further comprising:
downloading means for downloading, from said communicating means, a coordination program to realize said user image managing means, said user image database, and said coordinating means.

18. (Currently amended) A computer readable medium embodying a program of instructions for use in a user terminal in an Internet boutique system, said program comprising:

a first set of instructions for acquiring an image of a user of an Internet boutique system from outside of said user terminal while adjusting the size of the image such that the face portion thereof just fits in an indicated frame, and recording and managing the image of the user in a user image database;

a second set of instructions for displaying the image of a commodity selected by the user from the images of commodities for sale in the Internet boutique system, in combination with said image of the user; and

a third set of instructions for performing a process of purchasing a commodity determined to be purchased by said user.
